PROJECTS

Dirty30 - Workout App | [GitHub](#) | [Demo](#)

A workout app centered around thirty minute workouts with user customizable features. Each exercise includes video demonstrations.

- Developed with a React frontend and Ruby on Rails API for the backend
- Used Asynchronous Javascript and callbacks for the workout timer
- Implemented CSS Flexbox and Grid for layout styling

GoodBread - Social Media App | [Github](#) | [Demo](#)

A social media app about baking and recipes. Users can create profiles, post recipes, follow other users, and like and comment on other recipes.

- Used a React frontend with a Ruby on Rails API as the backend
- Utilized JWT and bcrypt for user authentication
- Developed with Redux for state management

Asteroids!!! - Asteroid video game clone | [Github](#) | [Demo](#)

A clone of the arcade game Asteroids that features a leaderboard of the top ten scores. Users can create profiles, get high scores, and see their scores on the leaderboard.

- Developed with a Ruby on Rails API backend for the database
- Established a game loop to update canvas objects
- Created Javascript forms for user information. Persisting to the Database

EXPERIENCE

O'Connor Photography Studio

Photo Editor

Edited, retouched, and green screened photos for school students and staff.

- Retouched hundreds of photos using photoshop
- Entered order information into a database using Photolynx
